## PREFACE

Dear readers,

This book has been undertaken under the belief that it would serve most useful purpose to students and practitioners of homoeopathy for ready reference. The book is a small one but the task has been a herculean one. Very often difficulties arise in working out a repertory as to where the different symptoms are to be found. Those who do not have the sufficient knowledge to classify symptoms, I would advice them to go through this book once or twice so as to be acquainted thoroughly with the different sections contained in the book.

I have not given a separate chapter on aggravations and ameliorations. The general aggravations and ameliorations will be found in the chapter of generalities, and the particulars will be found in different sections.

As regards the relationship I have put them in a tabular form for the convenience of the readers.

Besides what are found in the Allen's Keynotes and Nash's Leaders, there have been some important additions to give this little work a completeness so far as possible.
